

2019 Terex Equipment Operator's Rodeo

Obstacle Course

This is a team event with two of the three members operating digger derrick.

This event consists of two stations:

Vehicle #1 Digger/Derrick

Vehicle #2 Digger/Derrick

Each station/vehicle will be operated by two team members.

The event begins with team members in the circle.

Time starts when the judge signals "GO"

Digger/Derrick #1 will pick up a load (pre-hooked and positioned in a target circle) and maneuver it through a set of cones. The load will be maneuvered and placed in a target circle. Once the load has been lowered into the target circle, the load will be maneuvered back through the cones and lowered into the original target circle. At this point, the operator of D/D #1 has completed his task.

Digger/Derrick #2 will pick up a load (pre-hooked and positioned in a target circle) and maneuvered through a set of cones. The load will be maneuvered and placed in a target circle. The operator's view of the target circle will be blocked. Another team member will direct the operator using only hand signals. No verbal communication is allowed between the team member on the ground and the operator. Once the load has been lowered into the target circle, the load will be maneuvered back through the cones and lowered into the original target circle. At this point, the operator of D/D #2 has completed task.

Digger/Derricks will be operated simultaneously.

The event will stop when all three team members are back in the circle.
