

**2023 Journeyman
15KV Polymer Double Deadend Change Out
Mean Time: 6 Minutes
Drop Dead Time: 12 Minutes**

This is a 15KV energized bucket truck event. Class 2 rubber gloves and sleeves are required while performing the necessary work to cover-up and change out a set of polymer deadends installed on wooden crossarms.

- Teams will be allowed a 5-minute setup time before starting the event.
- Time starts at judge's signal.
- Cradle to cradle rubber glove and sleeve rules apply.
- Cover-up is needed on primary conductor and crossarms.
- The line needs to remain energized, so work being performed must not interfere with conductor continuity.
- Teams shall remove tension from the deadends, utilizing hoist(s) and grip(s).
- The polymer deadends shall be removed and lowered to the ground utilizing a handline. Once the Groundman touches the deadends, they may be raised back up for re-installation.
- Tools, equipment, and cover-up shall be removed when work is completed.
- Time stops when bucket is cradled.
